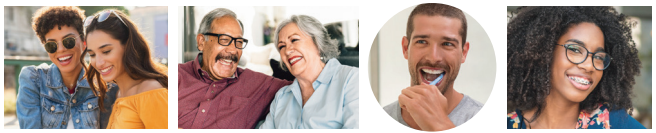
CARIFREE®

Treatment Kit

with Gel 1100



Designed to treat patients at high risk for cavities.

Please follow these kit instructions for best results.

Rinse first

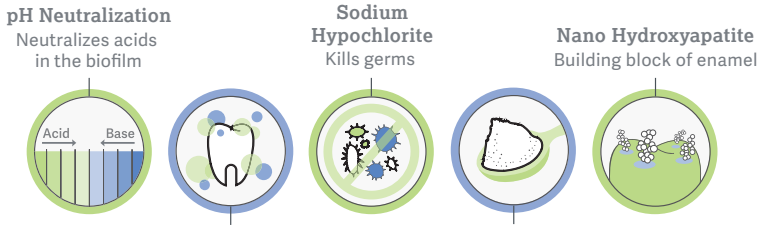
- Use **Treatment Rinse** daily until product is gone
- Mix 5 mL of Solution A with 5 mL of Solution B in the provided mixing cup, swish for 60 seconds

Note: Your teeth may be more susceptible to surface stains while using the Treatment Rinse. To avoid staining, it is important to wait 60 minutes before eating or drinking.

Brush second

- Apply a thin ribbon of **Gel 1100** and brush once daily in place of your regular toothpaste until product is gone
- Avoid eating or drinking for 30 minutes

What Makes This Kit Unique and Effective?



While brushing and flossing can reduce bacteria, neither alters the bacterial balance in your mouth. CariFree products are scientifically proven to reduce acidic cavity-causing bacteria, strengthen your enamel and keep you healthy in the long term. **We are excited to be with you on your journey to better oral health!**
